

Product pictured is not the exact style of the product studied in this document.

## Textura Light

Product Environment Profile is an environmental declaration according to the objectives of ISO 14021. Precise, accurate, verifiable and relevant information on the sustainability attributes of Textura Light.

Textura Light is made with premium materials including CeramicSteel whiteboard panels, textile covered acoustic sound absorption panels, and casters that lock and unlock so it can roll smoothly across the floor.

The model chosen for analysis from the Textura Light range is reference #TEXTURALIGHT.

### Final Assembly Location

Final assembly of Textura Light is in the Netherlands for Polyvision for the Asia Pacific Market.

### Recycled Content <sup>(1)</sup>

Pre-Consumer: 6%  
Post-Consumer: 9%

**Recyclability <sup>(2)</sup>: 84%**

### Product Certifications and Labels <sup>(3)</sup>

• SCS Indoor Advantage™ Gold

### Material Certifications <sup>(4)</sup>

- EU Ecolable textiles available
- Oeko-Tex® textiles available
- Cradle to Cradle Certified® Bronze

### Plant Certifications

- ISO 14001 – Genk, Belgium
- OHSAS 18001 – Genk, Belgium

**Textura Light may contribute to the following building standards and initiatives <sup>(5)</sup> in the following ways, depending on options.**

Potential contribution area	LEED® Credit	The WELL Building Standard® Feature
Recycled content Pre-Consumer: 6% Post-Consumer: 9%	BPDO - Sourcing of raw materials, Furniture and medical furnishings	
SCS Indoor Advantage™ Gold	Low-emitting materials	Feature 04
Materials Transparency	Textura Light may meet the Furniture and Medical Furnishings credit of LEED.	

<sup>(1)</sup> Calculations of recycled materials exclude packaging and are based on data provided by professional organisations, suppliers and other available information. Recycled materials are determined by weight and defined in accordance with ISO 14021. This data may include industry averages, ranges or other broadly-based information. Steelcase makes conservative assumptions when compiling this information to provide the most accurate recycled content calculations possible but variability in market conditions or manufacturing processes may result in higher or lower content. This document will be reviewed and updated periodically and is subject to change without notice. Recycled content may include pre- and post-consumer materials:

Pre-consumer materials (or post-industrial recycled materials) are materials diverted from the waste stream during a manufacturing process. Excluded is reutilization of materials such as rework, regrind or scrap generated in a process and capable of being reclaimed within the same process that generated it. Post-consumer materials are materials generated by households or by commercial, industrial and institutional facilities in their role as end-users of the final product, which can no longer be used for its intended purpose. This includes returns of material from the distribution chain.

<sup>(2)</sup> In locations where recycling is available. To be compliant with applicable regulations, Steelcase calculations are based on the materials having physical properties that allow recycling, our evaluation of the ability to disassemble the products and the actual availability of recycling services in the markets where the products are sold. Steelcase offers services to assist customers with end-of-use options including resale, refurbishment, charitable donation, and recycling.
